Dear Hiring Team,

"Attention is all you need." Google 2017 revolutionized the tech world with their transformer model, and I've been riding that wave ever since. As a former biology student with zero coding experience until 2021, I embarked on a coding journey in January 2022 and haven't looked back, writing over half a million lines of code in just two and a half years during my college days.

I've spent the last two years working as an intern, yet my contributions have consistently been on par with a full-time software developer (testimonials). Balancing my studies with real-world coding, I've taken on real work as if I were an employed software developer while still being a college student (testimonials).

In addition to my professional endeavors, I have mentored a dozen students, helping them navigate their paths to becoming successful software developers (testimonials). A proud FOSS enthusiast, I strive to leave a mark wherever I work, continuously pushing the boundaries of innovation and collaboration.

In my recent role, I single-handedly developed the technological infrastructure for <https://a2apoint.com>. I led the creation of both a Next.js web app and a React Native mobile app from a single codebase, including CMS, dashboards, multi-factor authentication, and various integrated features. My work involved using technologies like React.js, Next.js, React Native, Node.js, Keycloak, PostgreSQL, Docker, and CI/CD pipelines. The project now supports an estimated 5,000 active users per month.

Sincerely,

Joel Samuel Raj A
